

The following concepts have been developed within frames of the project:

- Production of organic fertilizers, contributing to the active development of mass use of bio-organic fertilizers in agriculture.
- Soil detoxification, which serves to restore the fertility of contaminated soils regardless of their type, to obtain environmentally friendly products of plant and vegetable production on a scale of mass accessibility for humans.
- Feed detoxification, which implies the development of technologies for the production of organic food in poultry and livestock.

### «Clear Water» project

This project is developed since 2015.

The goal of the project is to provide the population of industrial cities with clean drinking water. The project involves the massive use of water treatment systems based on the use of activated carbon.

# GPM PLANET

The GPM Planet group of companies has been operating since 2009. During this time, a lot of technical information and data was studied and analyzed. Pilot studies and tests were conducted. Raw materials, production equipment, and activated carbon technology were studied by leading manufacturers in China, India, and Southeast Asia.

“GPM Planet” is actively developing within the framework of its main activities, constantly supporting research and research in the field of ecology and, in particular, the production of activated carbon as an effective tool for solving environmental problems.

The need to create commercial projects is dictated by the high market demand for our products. In addition, the economic efficiency of our technologies also allows us to implement production in the framework of commercial projects.

Our projects are distinguished by financial autonomy, allowing us to ensure the constant profit of the parent company.

This provides a sustainable development path for the entire group of companies and expands our capabilities for future development.

## NOVEL PRODUCT

### FOR MORE EFFECTIVE CLEANING WATER & AIR, ALSO FOR MEDICINE

GPM CARBON IS THE PRODUCT OF A NOVEL, GREEN MANUFACTURING TECHNOLOGY DEVELOPED BY GPM PLANET. GPM PLANET IS A GROUP OF COMPANIES SPECIALIZED IN SUPPLY OF ENVIRONMENTAL FRIENDLY PRODUCTS AND SERVICES. DETAILS ABOUT THIS GROUP ARE AVAILABLE FROM THE FOLLOWING WEB PAGES!"

[WWW.GPM-PLANET.COM](http://WWW.GPM-PLANET.COM)

GPM PLANET IS GOING TO LAUNCH PRODUCTION OF COMPOSED PRODUCTS MIXING HIGH-GRADE ACTIVATED CARBON WITH CHITOSAN.

[WWW.GPM-CARBON.COM](http://WWW.GPM-CARBON.COM)

First of all, the activated carbon is unique itself. GPM Planet has developed a green method for the manufacture of activated carbon with a patented, innovative technology.

The GPM Carbon project is developed since 2015.

The project's goal is organization of production of active carbon, which quality should make its products competitive worldwide.

In general active charcoal carbon filters are most effective at removing chlorine, particles such as sediment, volatile organic compounds (VOCs), taste and odor from water.

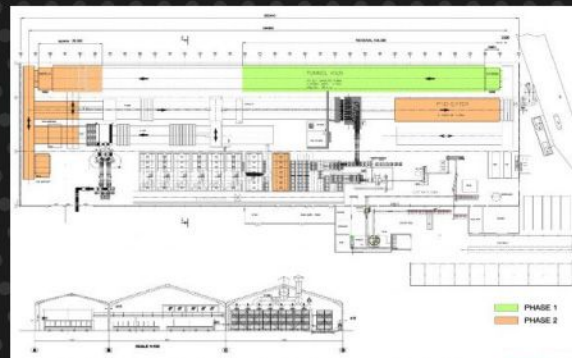

GPM Carbon has consistently shown its effectiveness for the purification of various liquid and gaseous materials according to test results.

GPM Planet is going to implement production of the novel technology of manufacturing active carbon, which would mitigate negative environmental impact.

## THE TECHNOLOGY IS ENVIRONMENTALLY FRIENDLY

There is no pollution caused by preparation of raw materials, in comparison with existing production of active carbon worldwide.

There is no waste during production which could cause secondary pollution.

ISO 14001:2015 is used to set out the environmental management system of our enterprise.

## HIGH DEGREE OF READINESS FOR LAUNCH

GPM has already invested own resources to a patented technology, a production prototype, testing of GPM Carbon products at test centres and by consumers, as well as Development of a detailed business project plan and opening offices in the UK and the Czech Republic.

At the moment, funding for elaborating a Sales & Marketing Plan is not enough. Besides, we need funds for preparation of the construction project, as well as certification and state permits.

## OTHER PROJECTS OF GPM PLANET

### "Construction" project

Engineering consulting. This project is developed since 2009.

General objectives of the project:

- Providing industrial engineering services and development of logistical solutions for corporate customers;
- Design and implementation of effective engineering chains and increase of

### "Organic" project

This project is developed since 2015.

The project's objective is development of technologies based on applications of active carbon for launching and functioning environmentally friendly manufacturing operations with rounded cycles in agriculture.
